

AMENDMENT

In the Specification:

Please add the following heading and paragraph on its own page at the end of the application, as follows:

ABSTRACT

An intermediary edible composition of a protein emulsion that can be formed into intermediary films for construction of sheets and pockets, and into extruded forms is disclosed. The emulsion preferably includes a fish-based protein and is used to create intermediary films, which are laid in concave mold halves. The molds are mated and subjected to a heating step where after a stable, protein-based pocket structure is formed. The pocket structure can be used for holding a variety of foodstuffs, and has excellent moisture absorption resistance as well as mechanical properties.
